

**ABSTRACT****~~OBJECT-ORIENTED SYSTEM FOR NETWORKING ONBOARD  
AERONAUTICAL EQUIPMENT~~**

This system for networking aeronautical equipment on board an aircraft comprises, for each equipment item, an object-oriented interface ~~(1, 2; 3, 4)~~ with object aspect means ~~(1, 3)~~, enabling it to know the onboard equipment to which it is assigned, as an object, in the object-oriented programming sense, capable of communicating with other objects in the object-oriented programming sense according to an object-oriented client/server model and with observer means ~~(2, 4)~~ recording events resulting from the operation of the onboard equipment.
